- The following changes were made in the organization of the Association for Chemical and Metallurgical Production, Usti nad Labem, on order of the director. The changes went in effect on 1 January 1953. The required approval of Main Administrator IV of the Ministry of Chemical Industry was given later.

- The section was centralized. Instead of each section having its master, all were combined under one accounting section. The electric maintenance mechanics were transferred to the electric shop from the various sections. The factory chipping unit was united with the head bookkeeper's office. The file of documents were set up in a separate section. The organization consultants were made a part of the work and wage section. The advisor for labor force and wage funds was made a part of the work and wage section. There were also organizational changes in the head bookkeeper's office and in the finance section.
- The consultant for improvement suggestions was included in the work and wage section. A workshop for improvements and investments under the construction section was created. Some changes in the organization of the transportation section were made. A consultant for water industry was set up in the office of the head power plant. A second shift for the cableway was provided for.
- A few further changes were made in the organization of the various units in accordance with the work required by the production plan and the plan for the labor force and the wage fund and in accordance with the directives of the Minister for Chemical Industry and similar orders.
- Section and group leaders were to receive tables of organization for their units which would be valid until 31 December 1953. The organizational structure must be held to. Changes may only be approved by the plant director at the suggestion of the work and wage section.
- The following is a list of important plant positions and their holders beginning 1 February 1953.
